Clinical Practice Gap Analysis of Obesity Treatment in the Modern Era

Amy Larkin, PharmD; Karen Badal, MD, MPH
Medscape Education, New York, NY

Introduction

A survey was launched on June 26, 2014, and participant responses were solicited from healthcare providers in four settings:

- Primary care
- Community health center
- Hospital
- Private practice

This study's objective was to assess current clinical practices and identify knowledge, competency, and practice gaps and barriers to improving patient care.

Methods

- A survey and interview were developed to assess educational needs
- A survey and interview were developed to assess educational needs
- A survey and interview were developed to assess educational needs
- A survey and interview were developed to assess educational needs

Results

- Of the barriers to treating obese patients, many could be addressed with planned improvement in clinical practice.
- The survey was designed to assess educational needs
- A survey and interview were developed to assess educational needs
- A survey and interview were developed to assess educational needs

Conclusion

- This survey was designed to assess educational needs
- A survey and interview were developed to assess educational needs
- A survey and interview were developed to assess educational needs
- A survey and interview were developed to assess educational needs

Disclosure

Nothing to disclose.
