The effect of the CME on clinical recommendations for treatment of Crohn disease (CD) has evolved from focusing on achieving mucosal remission to a more aggressive form of the disease. The online CME in the form of video-based discussion between 2 experts in CD could impact clinically relevant knowledge of gastroenterologists and primary care physicians (PCPs) managing CD. The online CME in the form of video-based discussion between 2 experts in CD could impact clinically relevant knowledge of gastroenterologists and primary care physicians (PCPs) managing CD.

**ASSESSMENT METHOD**

- **Questionnaire validation**
- **Survey data collection**
- **Pre-assessment questions**
- **Post-assessment questions**

**SUGGESTED METHODS**

- **Activity Snapshot and Pre- and Post-Assessment Questions and Answers**
- **References**

**RESULTS**

- **1.** The online CME in the form of video-based discussion between 2 experts in CD improved clinically relevant knowledge of gastroenterologists and PCPs. More educational activities are needed to ensure that gastroenterologists and PCPs are updated on the changes in current medical management of patients with CD, and in particular, when initiation of biologic therapy is appropriate in patients who present with a more aggressive form of the disease.
