Without adequate glycemic control, patients are at heightened risk

To address this gap, a patient/caregiver-focused educational initiative

Effect size was

For each of the 3 activities, a 12% to 32% (all P < .001) improvement in knowledge was observed among learners. This study demonstrates that well-designed online patient/caregiver-focused education was successful in improving knowledge of key components of successful T2D management. Such targeted and focused digital education has the potential to empower, engage, and equip patients and their care partners with information needed for self-care condition management.

The authors have nothing to disclose.
